猎豹移动天马广告 iOS-SDK 使用指南

(V1.5 版本)

目录

前提条件	2
1.为您的应用创建 MID 和 POSID	2
2.将 SDK 添加到 Xcode 项目中(手动方式)	2
3.初始化 CheetahMobileAds	5
4.创建您的原生广告	6
5.创建您的横幅广告	8
6.创建您的插屏广告请求	11
7.创建您的开屏广告请求	14
8.错误码说明	17

前提条件

- Xcode5.1 或更高版本
- 部署目标为 7.0 或更高版本

1.为您的应用创建 MID 和 POSID

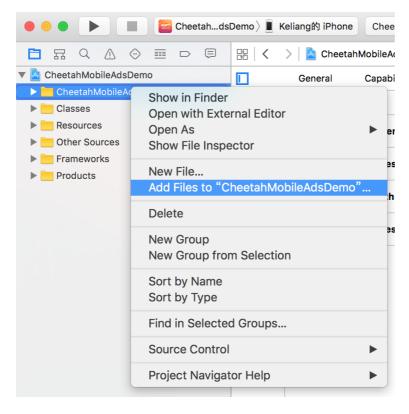

请到 http://pub.adkmob.com/index.php 为您的应用创建 MID 和 POSID (请先向商务申请 ssp 平台账号,商务会为您开户。)

2.将 SDK 添加到 Xcode 项目中(手动方式)

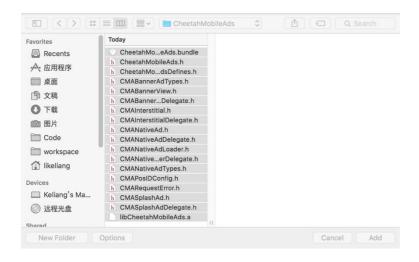

如果您还没有下载 CheetahMobileAds,请前往 Github (https://github.com/CMAdSDK/pegasi-ios-sdk)进行下载并解压

步骤 1:添加 SDK 文件到 Xcode 项目中

右键点击 CheetahMobileAdsDemo 项目,然后选择 "Add Files To CheetahMobileAdsDemo"(将文件添加到 CheetahMobileAdsDemo)。

添加 Cheetah Mobile Ads 文件夹下的 SDK 文件:

步骤 2:添加 SDK 需要的其它框架

SDK 需要以下 iOS 开发框架,您的项目中可能不包含这些框架:

- AdSupport
- CoreTelephony
- StoreKit

- CoreLocation
- Security
- SystemConfiguration

选择 Project Settings > Build Phases

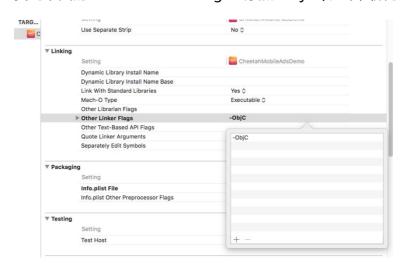

展开 "Link Binary with Libraries" 选项

点击 "+", 添加其它需要的框架

步骤 3: 更改静态库设置

点击项目 Target>Build Settings>Linking

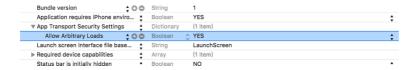

找到下面的 "Other Linker Flags"添加-ObjC (如下图所示)

步骤 4:修改 info.plist 中 AppTransportSecurity 配置 (针对 iOS 9)

由于 iOS9 引入了 AppTransportSecurity(ATS)特性,所以需要开发者在工程中增加

设置 NSAppTransportSecurity 以支持可以发送 http 请求,配置如下图

3.初始化 Cheetah Mobile Ads

在您的 AppDelegate.h 中引用 CheetahMobileAds

#import "CheetahMobileAds.h"

在程序启动时为 CheetahMobileAds 配置 MID

在-application: didFinishLaunchingWithOptions:方法中插入以下代码

[CheetahMobileAds startWithMIDConfig:[[CMAMIDConfig alloc]

initWithMID:@"YOUR_MID" chinaMID:@"YOUR_MID_INCHINA"]];

4.创建您的原生广告

步骤 1:在 NativeAdDetailsViewController 中声明 CMANativeAdLoader 对

象,以及CMANativeAd对象

@interface NativeAdDetailsViewController ()<CMANativeAdLoaderDelegate>
@property (nonatomic) CMANativeAdLoader *adLoader;
@property (nonatomic) CMANativeAd *nativeAd;
@end

步骤 2:初始化 CMANativeAdLoader

```
- (void)viewDidLoad {
    [super viewDidLoad];
    CMAPosIDConfig *config = [[CMAPosIDConfig alloc]
initWithPosID:@"1345103" chinaPosID:@"1346103"];
    self.adLoader = [[CMANativeAdLoader alloc]
initWithPosIDConfig:config adTypes:@[ kCMANativeAdLoaderNewsFeed]];
    self.adLoader.delegate = self;
}
```

步骤 3:在需要加载广告的地方调用-loadAd 方法

[self.adLoader loadAd];

步骤 4:实现 CMANativeAdLoaderDelegate 方法,来跟踪广告生命周期中的各个

阶段(可选)

// 加载广告成功后回调

- (void)nativeAdLoaderLoaded:(CMANativeAdLoader *)nativeAdLoader;
- // 加载广告失败后回调
- (void)nativeAdLoader:(CMANativeAdLoader *)nativeAdLoader

didFailToReceiveAdWithError:(CMARequestError *)error;

结果:

以下是 Demo 中展示原生广告的广告效果

5.创建您的横幅广告

您可以通过 Storyboard 或代码创建这个 BannerView,这里是用代码创建一个 320 x 50 的 BannerView.

步骤 1. 在 BannerAdViewController 中声明 CMABannerView 对象

```
@interface BannerAdViewController ()<CMABannerViewDelegate>
@property (strong, nonatomic) CMABannerView *banner;
@end
```

步骤 2. 在-viewDidLoad:中初始化 CMABannerView

```
- (void)viewDidLoad

{
    [super viewDidLoad];
    CMAPosIDConfig *config = [[CMAPosIDConfig alloc]
    initWithPosID:@"1345105" chinaPosID:@"1346105"];
    self.banner = [[CMABannerView alloc]
    initWithBannerAdType:kCMABannerAdTypeBanner];
    self.banner.delegate = self;
    self.banner.posIDConfig = config;
    self.banner.rootViewController = self;
}
```

步骤 3. 调用- loadAd 方法把广告加载到 BannerView 中

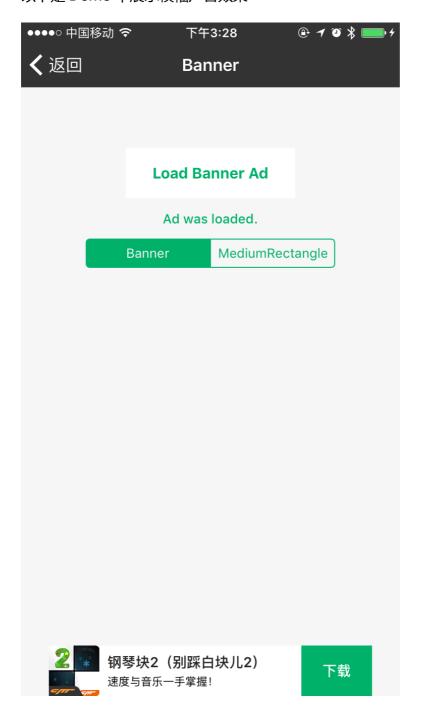

```
- (IBAction)didClickedLoadAdBtn:(id)sender
{
    [self.banner loadAd];
    self.adStatusLabel.text = @"Requesting ad...";
}
```

步骤 4. 实现 CMANativeAdLoaderDelegate 方法,来跟踪广告生命周期中的各个阶段(可选)

```
// 广告加载成功时回调
- (void)bannerViewDidLoadAd:(CMABannerView *)banner;
// 广告加载失败时回调
- (void)bannerView:(CMABannerView *)banner
didFailToLoadAdWithError:(CMARequestError *)error;
// 点击广告弹出网页视图前回调
- (void)bannerViewWillPresentScreen:(CMABannerView *)banner;
// 网页视图被关闭前回调
- (void)bannerViewWillDismissScreen:(CMABannerView *)banner;
// 点击广告离开应用前回调
- (void)bannerViewWillLeaveApplication:(CMABannerView *)banner;
```

结果:

以下是 Demo 中展示横幅广告效果

6.创建您的插屏广告请求

步骤 1. 在 AppDelegate 中声明 CMAInterstitial 变量

```
@interface InterstitalAdViewController ()<CMAInterstitialDelegate>
@property (nonatomic) CMAInterstitial *interstitial;
@end
```

步骤 2. 在-viewDidLoad:中初始化 CMAInterstitial 变量

```
- (void)viewDidLoad {
    [super viewDidLoad];

    CMAPosIDConfig *config = [[CMAPosIDConfig alloc]
initWithPosID:@"1345104" chinaPosID:@"1346104"];

    self.interstitial = [[CMAInterstitial alloc] initWithPosIDConfig:config];
    self.interstitial.delegate = self;
}
```

步骤 3. 在需要加载广告的时机调用- loadAd 方法

```
- (IBAction)didClickedLoadAdBtn:(id)sender
{
```

```
self.adStatusLabel.text = @"Requesting ad...";
[self.interstitial loadAd];
}
```

步骤 4. 实现 CMAInterstitial Delegate 方法,来跟踪广告生命周期中的各个阶段(可选)

```
//加载广告成功后回调
- (void)interstitialDidLoadAd:(CMAInterstitial *)ad;
//加载广告失败后回调
- (void)interstitial:(CMAInterstitial *)ad
didFailToLoadAdWithError:(CMARequestError *)error;
//插屏广告弹出前回调
- (void)interstitialWillPresentScreen:(CMAInterstitial *)ad;
//插屏广告推出前回调
- (void)interstitialWillDismissScreen:(CMAInterstitial *)ad;
//点击广告后离开应用前回调
- (void)interstitialWillLeaveApplication:(CMAInterstitial *)ad;
```

结果:

以下是 Demo 中插屏广告效果

7.创建您的开屏广告请求

步骤 1. 在-application: didFinishLaunchingWithOptions:方法中加入加载开屏代码

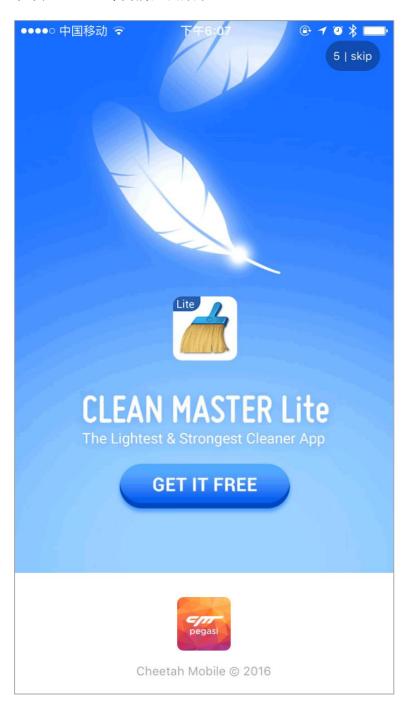

```
didFinishLaunchingWithOptions method
- (BOOL)application:(UIApplication *)application
didFinishLaunchingWithOptions:(NSDictionary *)launchOptions {
    [CheetahMobileAds startWithMIDConfig:[[CMAMIDConfig alloc]
initWithMID:@"1345" chinaMID:@"1346"]];
    CMAPosIDConfig *config = [[CMAPosIDConfig alloc]
initWithPosID:@"1345106" chinaPosID:@"1346106"];
    CMASplashAd *splashAd = [[CMASplashAd alloc]
initWithPosIDConfig:config];
    splashAd.delegate = self;
    splashAd.dismissAnimation = kCMASplashAnimationGrowFade;
    splashAd.backgroundView = [self splashBackgroundView];
    [splashAd show];
}
```

步骤 2. 实现 CMASplashAdDelegate,来跟踪广告生命周期中的各个阶段(可选)

```
// When ad loading succeeds, callback:
- (void)splashAdDidLoadAd:(CMASplashAd *)splashAd;
//When ad loading fails, callback:
- (void)splashAd:(CMASplashAd *)splashAd
didFailToLoadAdWithError:(CMARequestError *)error;
//Before the display of splash screen, callback
- (void)splashAdWillPresentScreen:(CMASplashAd *)splashAd;
//Before the disappear of splash screen, call back
- (void)splashAdDidDismissScreen:(CMASplashAd *)splashAd;
// ( When the ad is clicked, ) callback before leaving the application:
- (void)splashAdWillLeaveApplication:(CMASplashAd *)splashAd;
//When the "skip" button is clicked, callback:
- (void)splashAdWillSkip:(CMASplashAd *)splashAd;
```

结果:

以下是 Demo 中开屏广告效果

8.错误码说明

-1001	内部错误
-1002	拉取广告超时错误
-1003	拉取广告时网络环境错误
-1004	没有广告填充
-1005	JSON 解析错误
-1006	服务器错误
-1007	请求参数错误
-1008	资源文件下载错误
